Outfit Planner

CSCE 3440
Project Pitch - S1T1

YsCo

The Overview:

Problem:

- Cluttered closets from unused clothes
- Difficulty deciding what to wear daily
- Wasted time, space, and money

Solution:

- Webapp for wardrobe tracking & outfit planning
- Register and tag clothing (type, color, style, last worn)
- Suggest donation-worthy items to reduce clutter
- Visual outfit builder to plan combinations digitally
- Social sharing of outfits with friends

Impact:

- Smarter outfit planning
- Cleaner closets
- Sustainable clothing usage

Technical Depth

Core Web Language

- **HTML** – Page structure : wardrobe lists, planner, login screens
- **CSS** – Styling : font, color, spacing
- **JavaScript** – Interactivity : filtering, switching items

Frontend

- **React.js**

Reusable components || Real-time state management

Instant UI updates || API calls to backend

Database Auth & Hosting

- **Firebase -Firestore** : Cloud storage & share outfit
- **Firebase Authentication** : Secure sign-up & login
- **Firebase Hosting** : Deploys frontend

Backend

- **Node.js** : Server logic Processes frontend requests

Who is our audience?

- Students & professionals
- Families & busy individuals
- Fashion enthusiasts
- Schools/organizations
- Travel planning
- Morning outfit prep
- Outfit visualization
- Sustainability

Why is it Feasible?

- **Experience & Motivation**
 - Highly motivated to learn tools & framework
- **Prioritization to complete within this semester**
 - Focus on core features only
 - Careful scope management
- **Core features**
 - Clothing storage & organization
 - Outfit planning interface
- **User Input Design**
 - Upload and tag each clothing item once
 - Easy interaction: click to swap items in planner
- **Future Expansion**

We are looking forward to your feedback!
