

Sprint 2 Reflection

I successfully accomplished my part of the code through countless hours of learning through LinkedIn learning, YouTube, and code academy. Though this sprint was the hardest of all of them because of the lack of time I had, I was satisfied with what I got done. I communicated with my team to make sure I am on the right track when programming my part of the project. It was important to share my concerns with the team so that we could together solve any issues that came our way.

Since I had no prior experience or even knowledge of the framework we were using, I had to go out of my way to learn and acquire information outside of class time. I also lacked information on language and the backend service my group decided to use for our project. We decided on going with flutter as our framework, dart for our language, and firebase for our authentication and backend service. It was a challenge to complete my part of the assignment since it was a little different than usual. Because flutter isn't as widely used as python or other programming languages, there weren't a lot of sources I could rely on to help me.

I learned how hard it could be to meet up with a whole team outside of class. Every time we tried setting up a mandatory meeting with the teacher, something would prevent us from being able to do so. For example, the first time we set up a meeting after discussing it for hours was at Thursday, four o'clock. Later, we learned that our spot had been taken up by another group, so we all agreed on meeting at four-thirty. We were then informed that our teacher had a class that time, so we finally set up to meet on Friday morning. All in all, I learned to manage my time better and be more organized as it can help a lot with stress.

I learned to not give up easily and to stay on track. As I was just thinking of doing my part, I would start stressing out and worrying about how I don't know the language yet or I've never created an app before. I kept on getting distracted, so I put my phone out of my reach knowing I would be too lazy to get it.
