

Sprint 4 Reflection

As an individual, I was responsible for creating a new home screen for our app. It shows the user a preview of their outfit by aligning the top, bottom, and shoes vertically. The user is also able to click on arrows on the left and right of each item to scroll through their clothes. I also suggested a whole new user interface where the view closet and add item options along with the home screen are at the bottom like on TikTok. The user can click on the icons at the bottom to access different pages instead of having to go to the home screen specifically to access the closet or add items.

The biggest challenge for me was my emulator had not been working since I started on the project. I had asked ai, googled it, and even searched it up on YouTube, but my emulator would not run and gave me the same error—flutter root not specified. None of the solutions they gave me worked, so I resorted to starting everything on my dad's computer. It took me about three hours to download everything and fix some minor issues, but it finally worked. When I realized the problem was with the cloned repository, I went back to where I was originally working on, my MacBook, deleted the cloned git repository and the project file, and cloned it again. Finally, I ran the emulator again and it worked!

This sprint taught me not to be afraid of restarting. Previously, I avoided deleting my project file, afraid that I would lose some important file I hadn't saved yet and I didn't want to start everything on another computer. Before this sprint, I was always in charge of the backend, so it hadn't been my concern until this sprint. I am excited to continue this project knowing what the UI looks like unlike before, where I was working blindly.

Because another one of my teammates needed my code to work on their part, I had to rush to finish my part of the code which put a lot of stress on me. I could have resolved this by communicating with her and asking to swap our responsibilities. In the future, I will make sure to communicate anything and everything with my teammates.
