

Sprint 6 reflection

During this sprint, I implemented the tutorial feature for all users. It guides them through the app using a feature discovery package. When users tap the help icon, the tutorial walks them through the app step by step, teaching them hidden features and improving their understanding of the app. This approach lets users to explore at their own pace rather than simply reading instructions, making sure they can revisit the tutorial if they need to be reminded. My contribution strengthened the app's usability and provided a more interactive experience, giving users direct control over learning how to navigate the system.

One challenge I came across was trying to make the tutorial pop up automatically for new users. I spent two days trying to implement this but ran into so many technical roadblocks that made the system really complex. I realized that forcing the feature to work this way was inefficient and created extra code. To address this, I changed my approach and designed the tutorial to be triggered when the user taps the help icon. This solution not only simplified the system while maintaining the tutorial's usefulness, but it also gave users access when needed.

This experience taught me the importance of adapting and problem-solving strategies. Instead of persisting with a difficult solution that wasn't working, I adapted my perspective and found a better and more practical approach that completed the same goal. When I tried solving the issue on my own, I realized that consulting teammates earlier would've saved time and reduced stress. These lessons taught me that flexibility, problem-solving, and effective communication are essential skills for personal and professional growth.

In the future, I could improve by looking for help sooner when coming across any roadblocks. I also recognize chances to plan my work more strategically to avoid time pressure during busy periods. Finally, I could find ways to make future features more easier to understand from the start, reducing the need for workarounds or additional guidance. Applying these improvements will strengthen both my individual contributions and the overall team process in upcoming sprints.
